AS + **RHINO** Technology Group

Urgent and Reliable Data Center Decommissioning

CHALLENGE

Rhino Technology Group faced a difficult task. Their multinational customer needed help with the urgent decommissioning of a large data center against an immovable four-day deadline, facing additional fees and penalties if they didn't meet that target. With 43 fully populated cabinets containing 800+ devices, there wasn't a moment to lose.

SOLUTION

Due to the urgency and location of the project, Rhino Technology Group needed support to meet the deliverables. It made sense that they would turn to Aegis Solutions as a reliable, agile partner to help them fulfill the need. The Rhino team relied on Aegis Solutions' IT Asset Disposition (ITAD) services to deliver a successful, timely outcome for the end customer.

> Thanks, Aegis Solutions— mission accomplished! Aegis truly did an amazing job!

RESULTS

With a high standard of service and resolution speed, Aegis specialists physically removed, palletized, and readied all 800+ servers and associated materials within the tight four-day timeline. The collective effort yielded 1,500+ pounds of cabling and 50+ pallets worth of materials.

That was all while adapting to problems as they arose. Originally scoped as removing rails and assets, the team quickly found they needed to adjust their gameplan to include cabling removal while maintaining the existing timeline. Physical space constraints within the data center compounded the challenge. The operation required perfect orchestration so assets and materials could be removed, packed, and loaded in synchronized waves, ensuring no time was lost. Ultimately, Aegis provided a seamless and on-time delivery for Rhino Technology Group and the end customer.
